CC Docket 96-263

Comments of General Communication, Inc.

General Communication, Inc. (GCI) hereby submits
comments in response to the Notice of Proposed Rulemaking,
Third Report and Order and Notice of Inquiry (Notice)¹
issued in this matter.

Introduction

The Commission has tentatively concluded that information service providers (ISPs) should not be subject to access charges as they are currently constituted. The Commission states that it will support policies that best facilitate the development of high bandwidth data networks while preserving efficient incentives for investment and innovation in the underlying voice network. The Commission asks for information on the effects of Internet on network

usage, incumbent LEC costs recovery and development of the information services marketplace. The Commission notes that the Internet is being used today to complete voice calls.

The Commission should apply revised access charges to ISPs. Payment of access charges by ISPs is consistent with fair competition.

**Information Services Should be Subject
To Reformed Access Charges**

CCI agrees with the Commission that ISPs should not pay access charges as they are "currently constituted." However, the Commission has issued this Notice to reform the access charge structure. CCI believes that ISPs should be subject to access charges, as reformed in this proceeding.

CCI believes that any ISPs, including Internet providers should pay access charges. Otherwise, ISPs, including Internet telephony providers receive a subsidy from interexchange carriers. Use of the Internet for voice communication is much more widely available than the Commission seems to realize and the technology is certain to improve even further in the near future. It is now possible to download software from the Internet and use that software to complete voice communications between a computer at the originating end and a normal landline telephone at the

terminating and.² The voice quality is quite good. The provider of the software demonstrated on the tape intends to institute a charge of about 5 cents/minute after a demonstration phase. The provider of this service can hardly be distinguished from an interexchange carrier, yet the provider escapes access charges.³

The use of Internet for voice communications is likely to spread significantly as technology improves. It is entirely appropriate to allow Internet providers to compete directly with interexchange carriers, but to exempt the Internet providers from the same charges placed on interexchange carriers is inappropriate. Such price distortions are contrary to the competitive market that the Telecommunications Act of 1996 was intended to promote. They are also inconsistent with the "a minute is a minute" approach that the Commission has embraced in other contexts.

Access charges established at the proper cost level should not unduly constrain use of the Internet or other information services. Indeed, usage charges at the proper level should encourage an economically appropriate level of

²An audio tape demonstrating this technology is available to the Commission.

³GCI pays on average access charges equal to 4.3 cents a minute on each interstate call and 7 cents a minute on each intrastate call. Either a 5 cents a minute rate or a rate bundled in the ISPs basic monthly package rates puts carriers such as GCI at a disadvantage.

usage.

Conclusion

Access charges should be applied to information service providers as soon as access reform is complete. Exempting information service providers is economically inefficient and promotes unfair competition.

Respectfully submitted,

GENERAL COMMUNICATION, INC.
